DETAILED ACTION

Allowable Subject Matter

Claims 1-20 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: The invention is directed to an agent containing reservoir or set of reservoirs for incorporation into an electrotransport delivery system and the controller for delivering the agents. In comparison, prior art multiple agent or replaceable delivery systems do not have a great degree of control over the delivery profiles. See, for example, Reller et al., US 5,053,001. Sibalis, US 4,883,457 also discloses the concept of replaceable reservoirs but does not devise a way to control the delivery profiles by altering the volume and surface area characteristics of the electrode contact area and reservoir skin contact area. Nelson et al., US 4,917,688, is cited of interest, and includes reservoirs having alterable surface to body contact areas, however, it is not an electrotransport delivery system and the reservoirs do not appear to be replaceable. In contrast, the invention of the instant claims include reservoirs having a predetermined volume/surface area to be placed in contact with a body; and a controlled surface area in contact with the electrode, the combination of which results in a controlled accurate delivery of multiple types, rates, durations, etc., of agent delivery.
